

PRESSALIT®

Changing tables

Uncomfortable working conditions should never stand in the way of providing the care needed for changing children. That's why Pressalit has developed a range of changing tables that contribute to a safe and comfortable working environment by removing the dangers associated with inappropriate lifting techniques.

Height-adjustable changing tables **Make everyday work easier**

Height adjustable tables are needed to ensure good and healthy working postures. Pressalit changing tables are carefully designed to ensure that staff in education and healthcare facilities can provide the necessary care for children, without exposing their backs to heavy lifting. The changing tables are all well-suited for residential use to reduce unnecessary lifting in everyday life.

Safety for children and adults

Countless lifts and poor working postures can unfortunately be part of daily work for many employees of daycare institutions and residential childcare providers. The lack of attention to occupational health and safety often leads to chronic back, neck and shoulder pain – which not only negatively impacts employee well-being, but also interactions with colleagues and the children.

A height-adjustable changing table contributes to a safe working environment by preventing unnecessary lifting and a poor working posture when changing children. These practical changing tables are easy to adjust in height, adapting to the individual user so that all employees benefit from an ergonomically correct working position at the same changing table. The low-start changing tables offer the added advantage that small children can easily crawl on to and down from the changing table.

The changing table also has a safety function to prevent crushing. This function ensures that nothing and nobody is crushed under the table, as the table automatically stops if it encounters resistance while being lowered. The height-adjustable changing table is consequently safe for all.

Highest standard of hygiene

A height-adjustable changing table helps staff provide the best care for the child – without compromising health, safety or hygiene in the workplace.

The worktops are made of moulded ABS plastic with a back edge design that keeps the wall clean. The changing tables also have rounded edges for quick and effective cleaning, which makes it easy to maintain a high standard of hygiene.

Child-friendly design

Our changing tables are developed with an eye for ergonomic design and hygiene – without forgetting the importance of child-friendly functionality.

The low-start changing tables make the changing situation a playful experience for children and adults, combined with appealing, child-friendly designs. The children have a more joyful experience, and the work is easier for staff.

A good investment

A height-adjustable changing table is an investment in many things. Above all, it is an investment in health and safety in the workplace. An improved working environment means less chronic pain and injuries for staff, and thus fewer sick days. The changing table also makes the work easier and more enjoyable, which improves job satisfaction and increases the time available for giving care to the children. In reality, this is the most important investment: an investment that frees up time and energy to give more care, without compromising health and safety in the workplace.

PREMIUM BATHROOM SOLUTIONS SINCE 1954

Pressalit A/S is a Danish privately owned company with production facilities in Ry, Denmark. Since 1954, we have been designing and producing toilet seats of the highest quality. And since 1975, Pressalit has also been developing accessible bathrooms and height-adjustable kitchens for people with reduced mobility. This has made us one of the world's leading manufacturers of premium bathroom solutions. High quality, flawless design and reliable functionality are the core features of our wide range of products.
